Professional Concrete, Inc. Invests In New State-Of-The-Art Curb Machine

For 22 years, Professional Concrete has been the Grand Strand's leading full-service concrete contractor. From concrete footings to foundations, slabs, driveways, sidewalks, and pool decks, Professional Concrete takes great pride in the quality of their work and relationships with their customers. Recently, Professional Concrete established a new dimension of their business with the purchase of a state-of-the-art curb machine. It's just one more way Professional Concrete adapts to, and sometimes takes the lead on, modern ways of doing business.

The boom in the area building industry prompted Professional Concrete, Inc. in making the decision to invest in a curb machine.

"We're trying to expand our offerings to keep pace with the volume of people moving here," said Kyle Russ, operations/sales manager with Professional Concrete. "With new residential and commercial areas being established and, on the rise, curbing and the gutters will need to be done

for the developments, the neighborhoods, and the shopping centers."

Professional Concrete, Inc. said the new machine makes the curbing process more efficient. Traditionally, a job site crew first creates a pathway for the machine by placing stakes and a string line, which is time consuming and can only be completed one portion at a time.

"Our machine uses a GPS system, so it eliminates the need to send out a crew ahead of time," said Professional Concrete, Inc. "We can set up the job within an hour or two and go right to work, instead of having to wait for a crew, and then do the job in

Professional Concrete is located @ 1070 Redi Mix Rd. In Little River, SC.

and it's more effective. So it was an investment, but we feel this machine will pay off not only for us but for the builders as well, because it's going to save everybody a lot of time."

The Professional Concrete team spent months learning about the machine's capabilities, and now they're ready to put it to work.

"We're prepared and ready to go," says Professional Concrete, Inc. "It's a new phase of our company. To offer this service in this capacity is a big deal for us."

Professional Concrete also noted the growth and adaptability is essential in the building industry, and with 22 years of experience, Professional Concrete has proven its excellence.

"This is definitely an industry where technology changes everything, over and over, and if you don't change with it, it's going to pass you by. We stay educated on what's out there, and we're continuously learning and staying up with what's on the market."

Another trait that sets Professional Concrete apart from its competitors is their employees.

"The people here are invested in what they're doing," said Staton McIntyre, "They're educated on the product, they know what they're doing, and they know how to take a project from A to Z."

"It takes away the primitive way of forming a curb. This is the most advanced curb machine on the market. With the machine using GPS, it frees up time, it's less hours,

"We've tried to put a white-collar spin on a very blue-collar business.

The flow of our communication and the level of professionalism are exceptional. We take the time to build relationships and a trust factor with the customers, and we hold our standards as high as possible. When they see that repetitive attention to detail, it creates trust."
